Enterprise Architecture

Analyse baseline business architecture
using TOGAF artefacts

It is illegal to copy, share or show this document without the written permission of the copyright holder

Understand the baseline

Understand the baseline

Review initiation products

Clarify NFRs

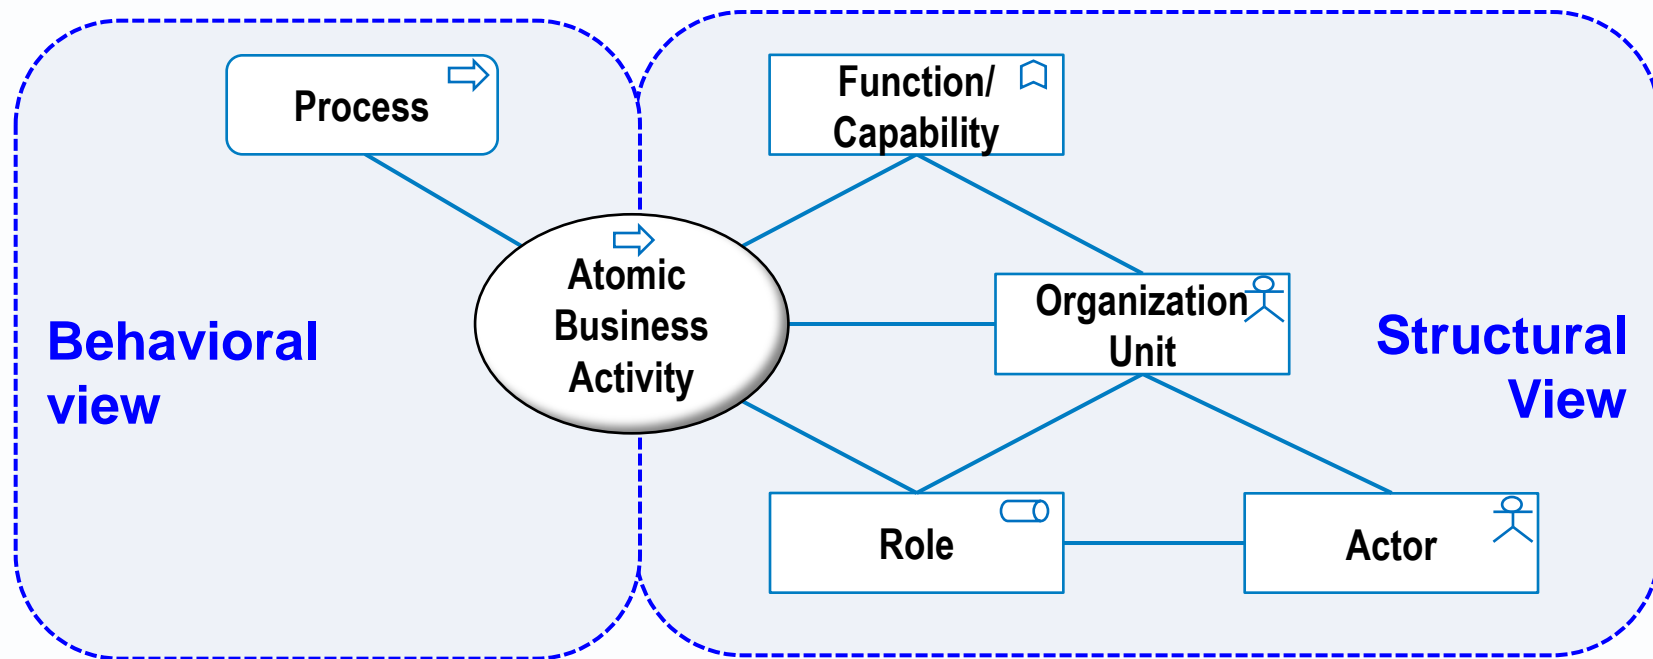

Design the target

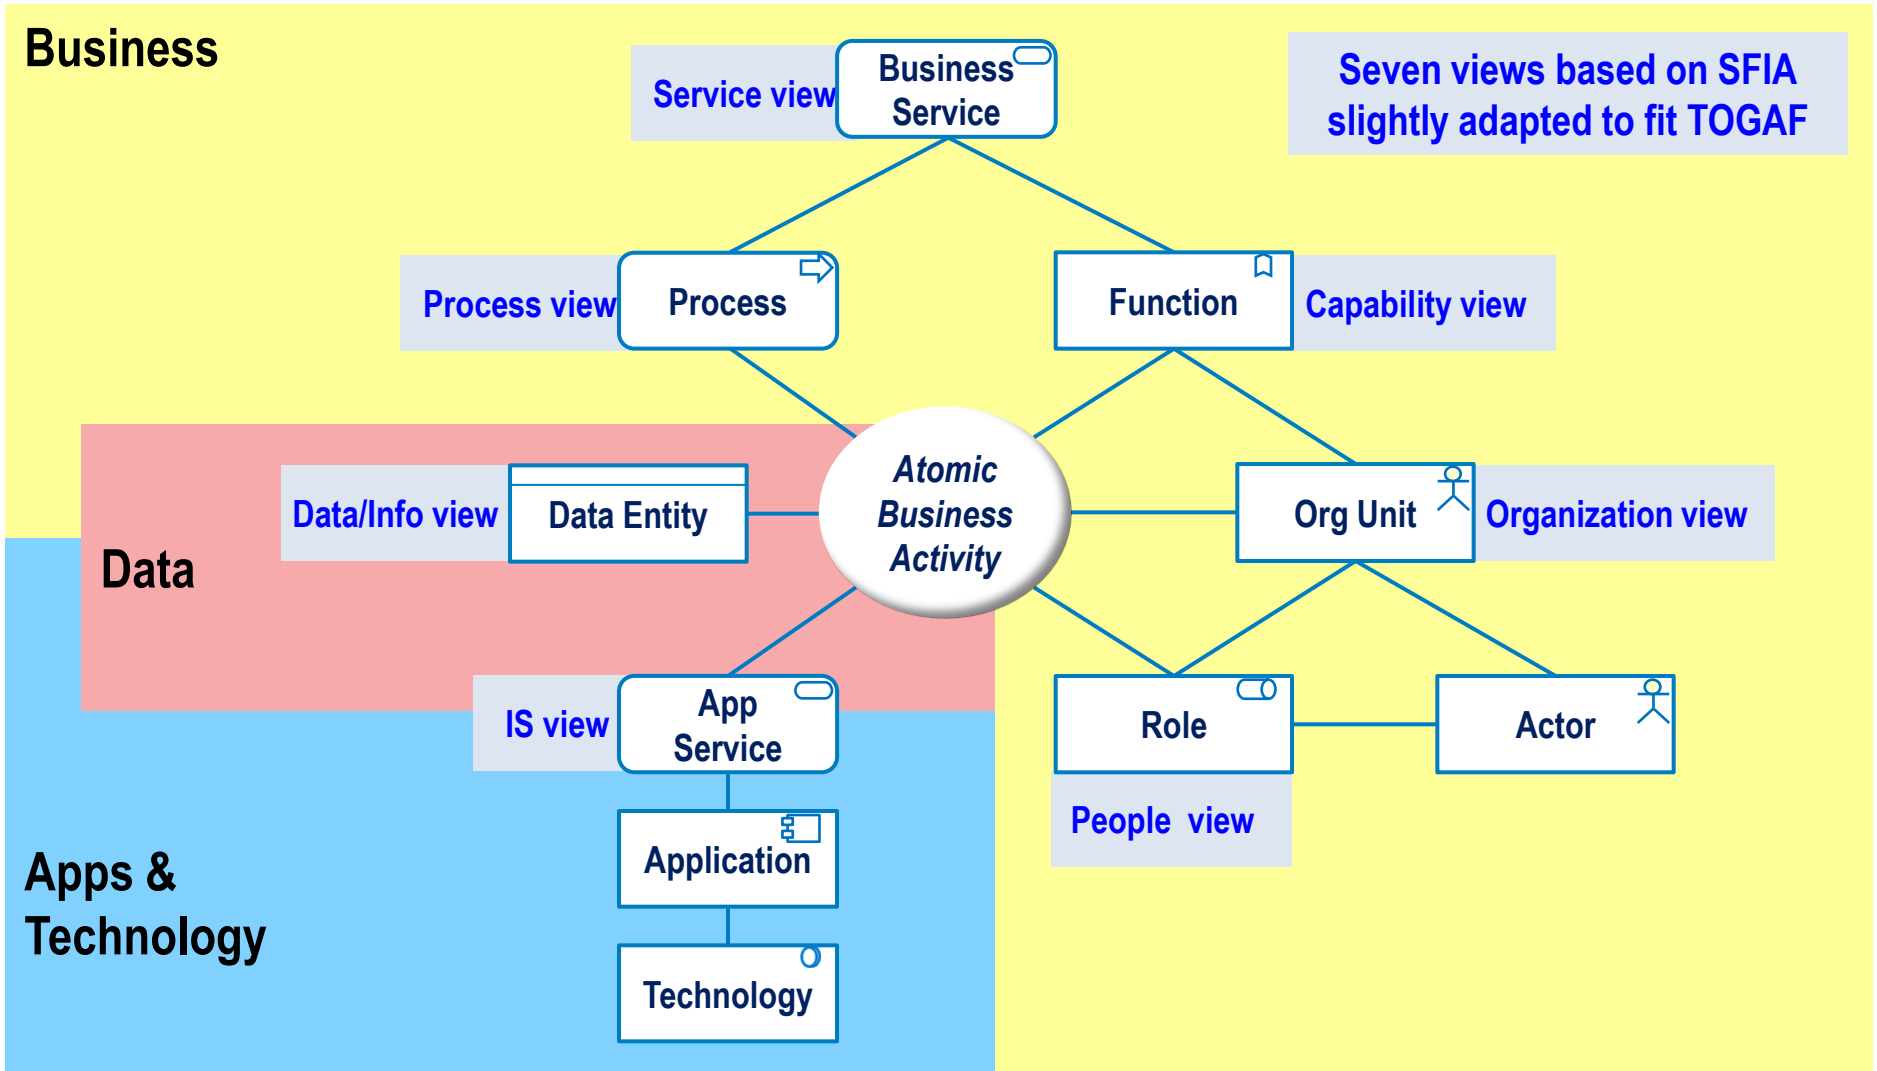

1. Understand the baseline business architecture
2. Understand the baseline data architecture
3. Understand the baseline applications architecture
4. Understand the baseline technology architecture
5. Look for reuse
6. Assess constraints and opportunities

- ▶ The foundation of any activity system model is the
- ▶ **Atomic activity:** a process that is not further decomposed.
- ▶ Some recommend modeling down to the level of one-person, one-place one-time (OPOPOT) activities, but the initial analysis may stop short of that.

Four views of activities

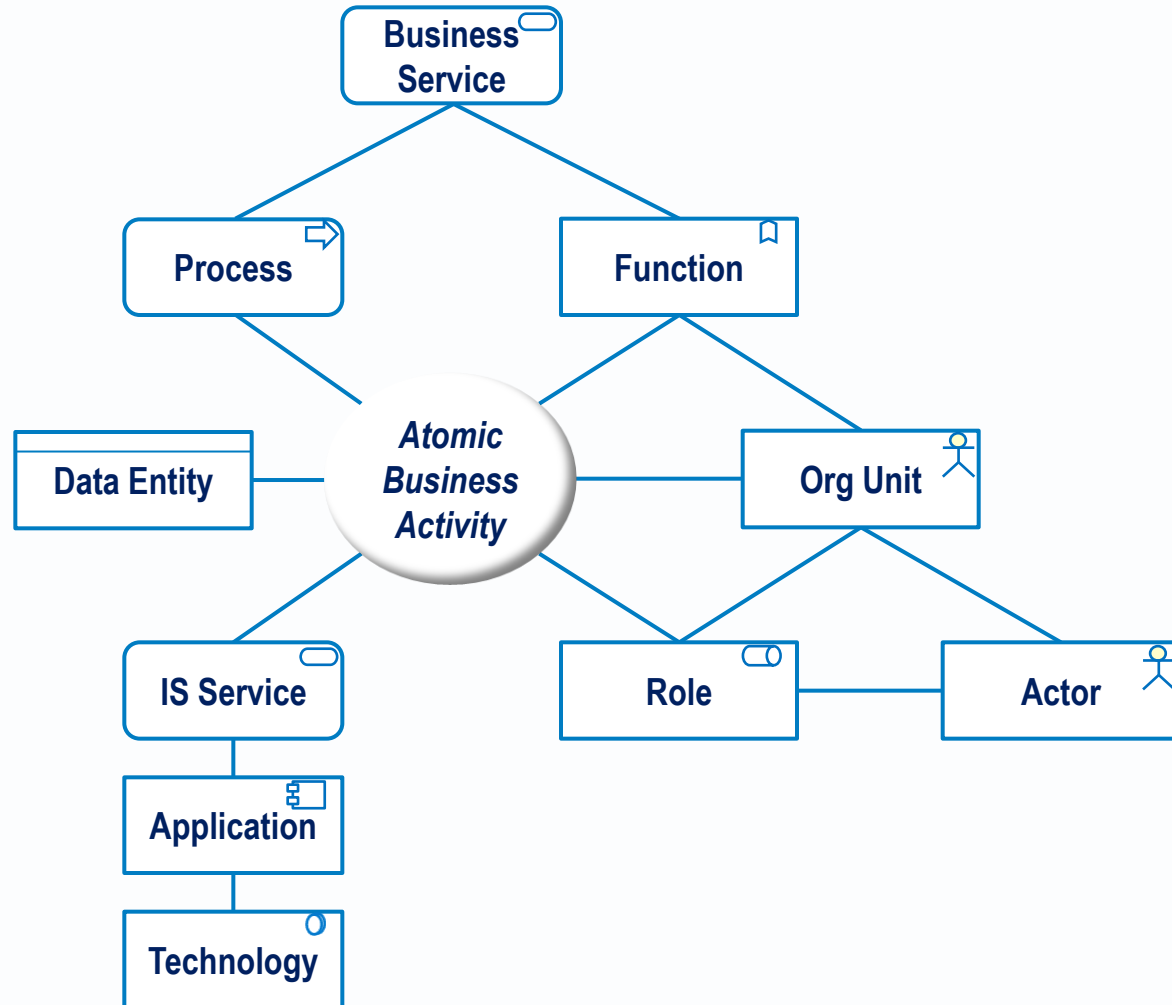

- ▶ **A process** groups activities in sequence over time
- ▶ **A function or capability** groups activities using some other logical cohesion criteria
- ▶ **An organisation unit** groups activities performable by one managed team
- ▶ **A role** groups activities performable by an actor with the requisite ability

4th level: Understand the business architecture (EA)

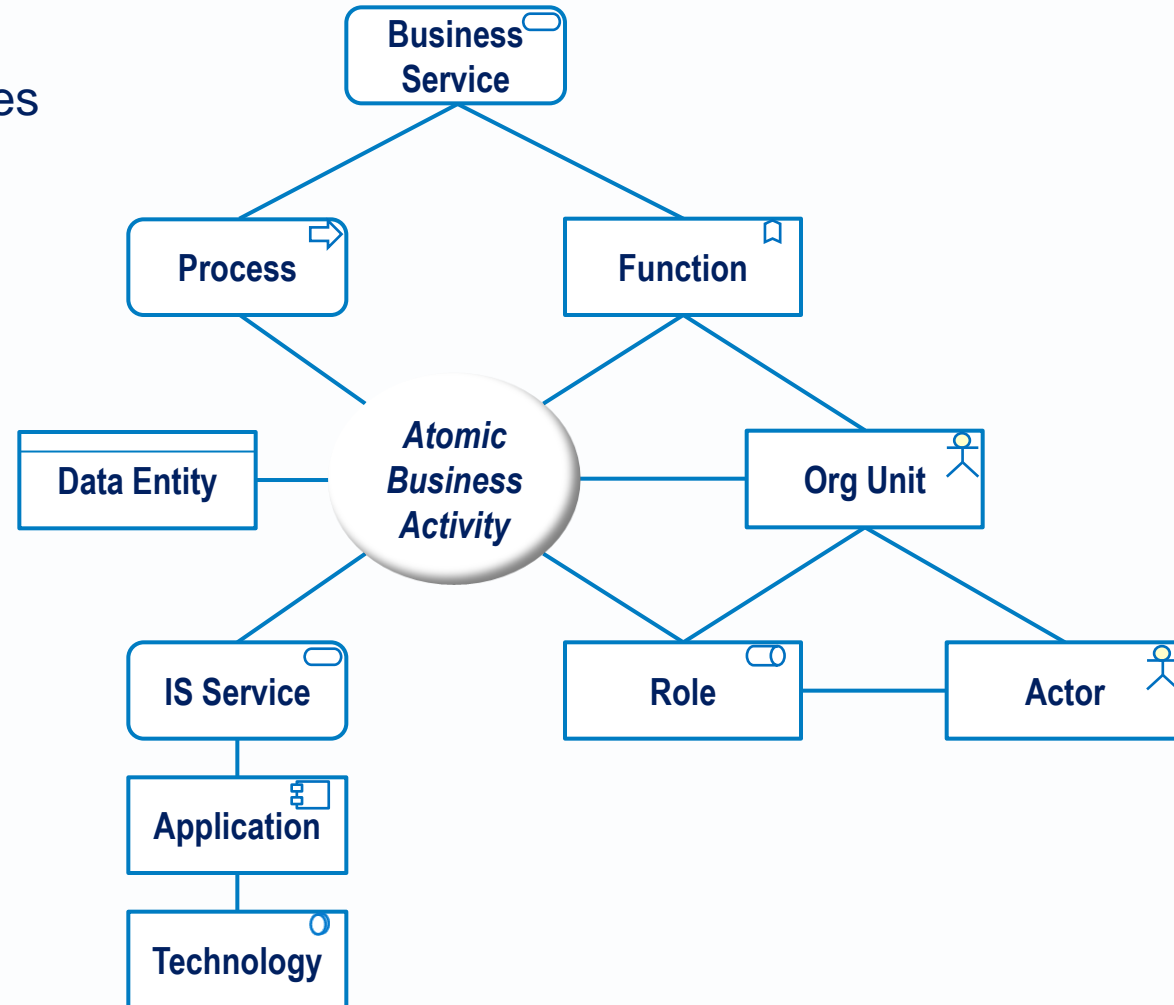

1. Form a motivation view
2. Form an organisation view
3. Form a capability view
4. Form a service view
5. Form a process view
6. Form a people view
7. For a data/information view
8. Form an applications view

Form a motivation view

Goals and Objectives

1. Form a motivation view
 - Document goals and objectives
2. Form an organisation view
3. Form a capability view
4. Form a service view
5. Form a process view
6. Form a people view
7. For a data/information view
8. Form an applications view

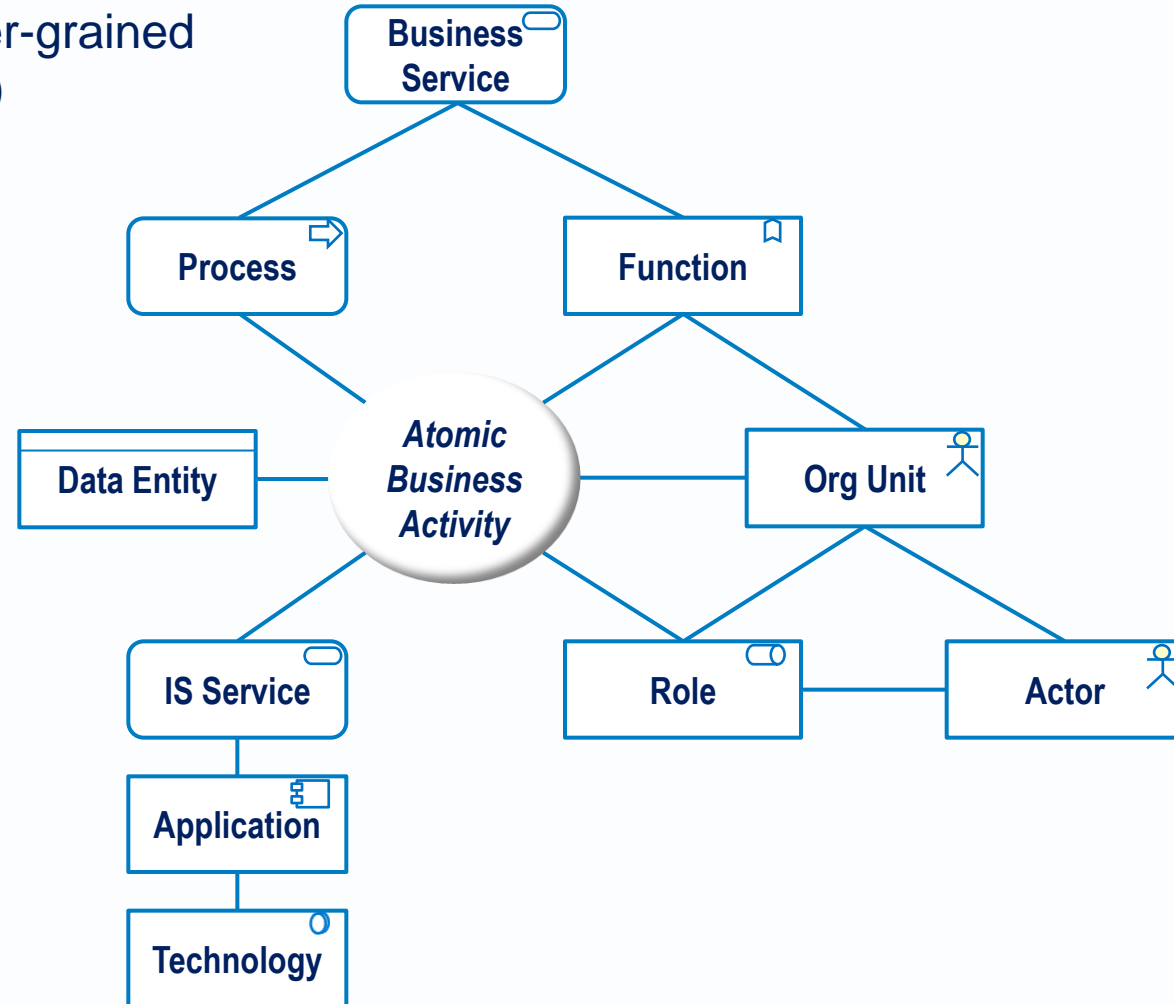

Form a motivation view

Goals and Objectives

Decompose top-level goals into finer-grained objectives (not a strict hierarchy)

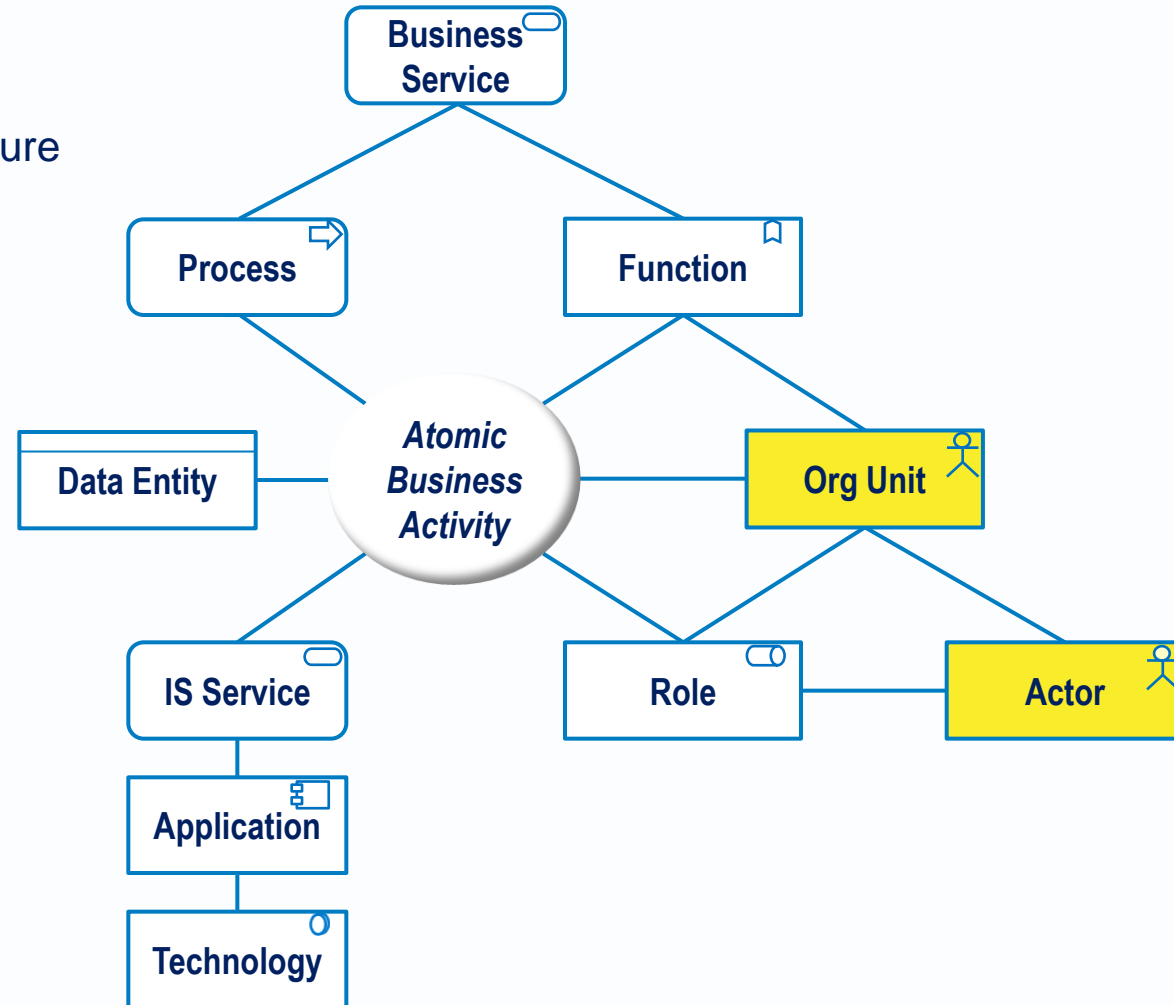

Aim hierarchy

- Increase market share
- Increase marketing...
- Increase capacity...
- Reduce prices
 - Cut part costs
 - Reduce number of parts
 - Use cheaper materials
 - Cut assembly costs
 - Reduce number of parts
 - Simplify interfaces
- Increase profit...
- Improve working conditions...

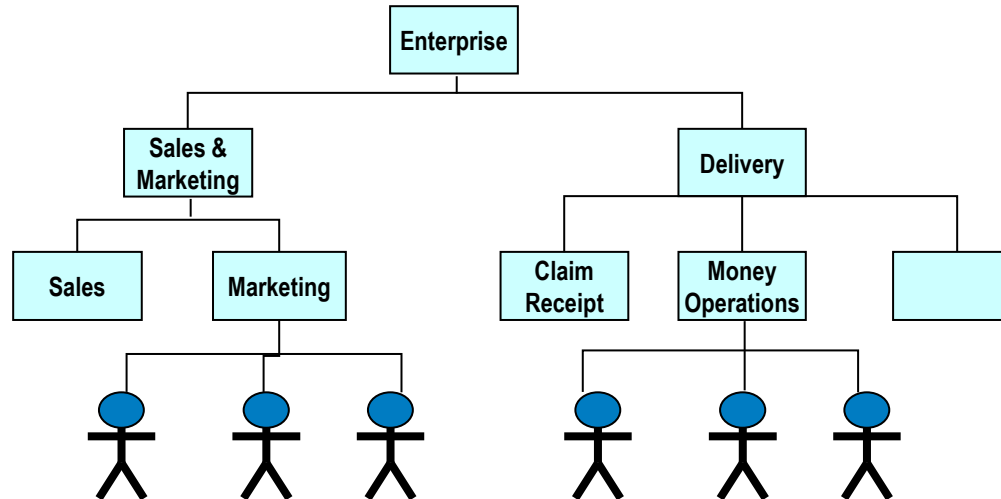

Form an organisation view

1. Form a motivation view
2. Form an organisation view
 - Document the organization structure
3. Form a capability view
4. Form a service view
5. Form a process view
6. Form a people view
7. For a data/information view
8. Form an applications view

Form Organisation view

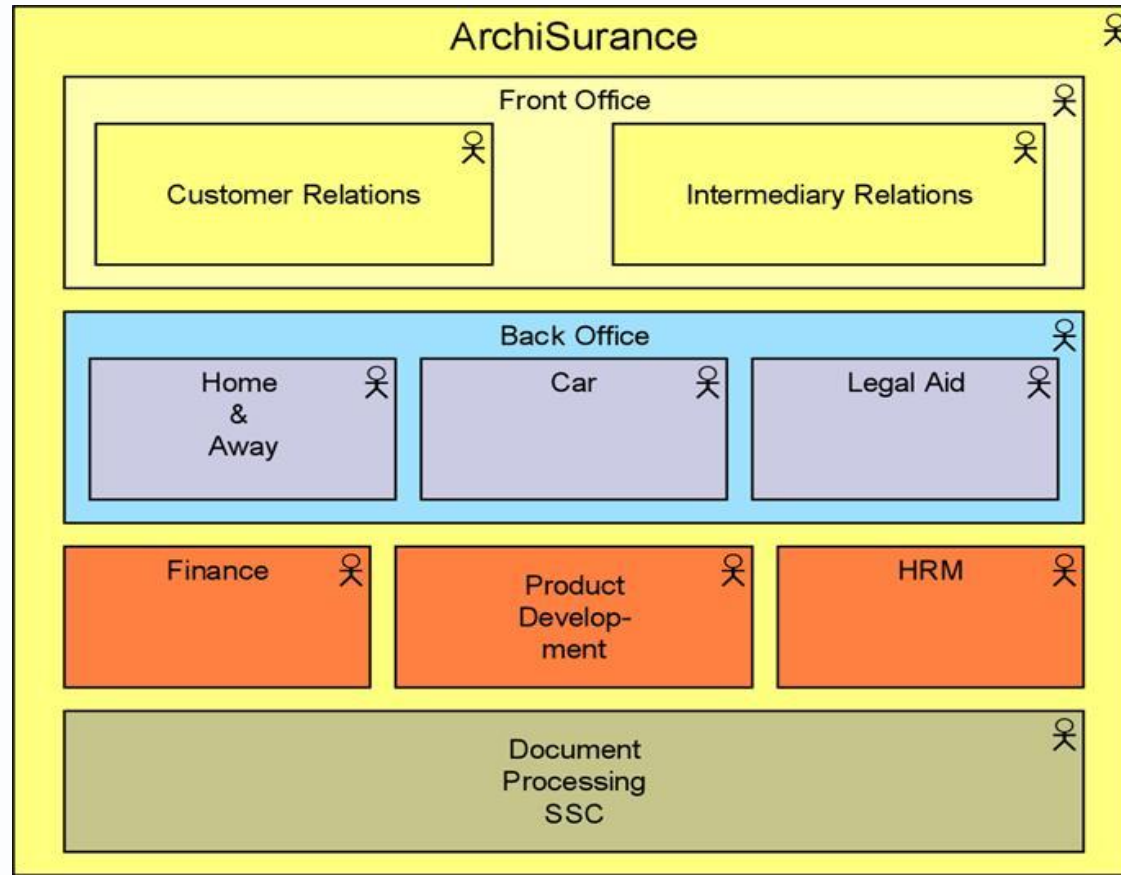

- ▶ Why study the Organisation Decomposition.
- ▶ Because the politics, problems and possibilities are much affected by it.
- ▶ So first, find or form an organisation *chart covering the area of interest*.

- ▶ An organization unit should be a self-contained unit of resources with measurable goals and objectives; it should also have a manager.

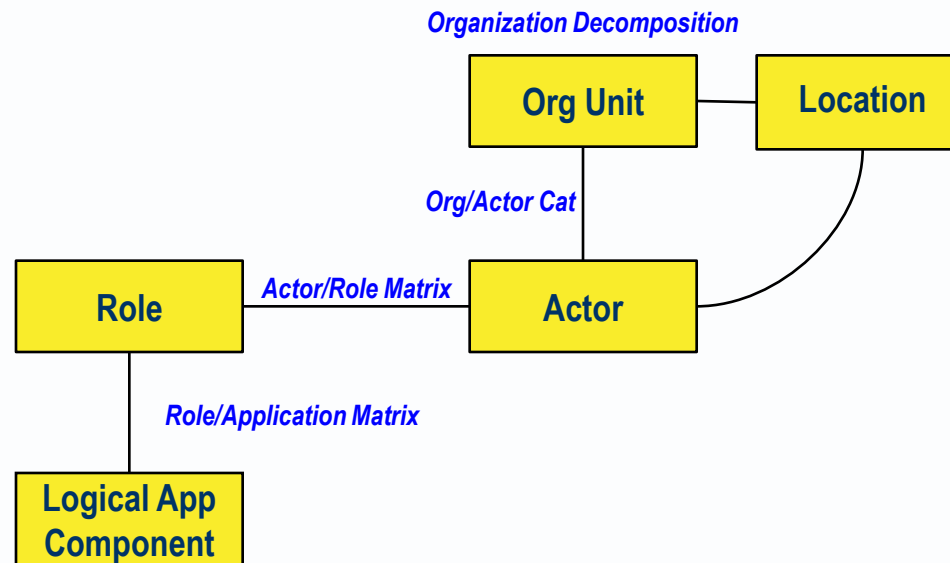

TOGAF with ArchiMate

► Organisation Decomposition Diagram + Organization/Actor Catalog

What might you find already documented?

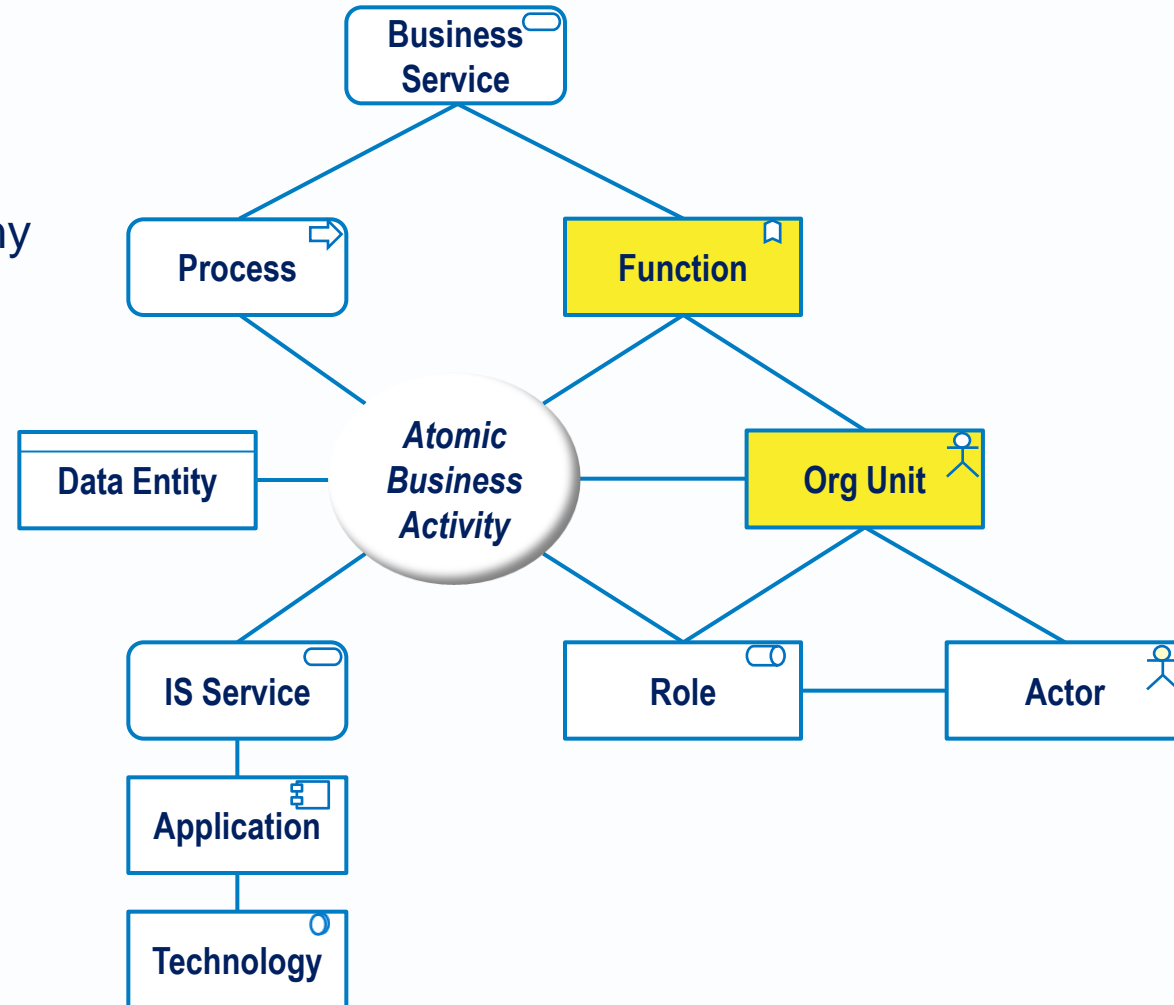

- ▶ A company directory, identity management or access control system may record and relate some or all of these entities

- ▶ RBAC Role-Based Access Control (as in AWS, Azure, etc.)
- ▶ “Principle of Least Privilege”

Form a capability view

1. Form a motivation view
2. Form an organisation view
3. Form a capability view
 - Define a logical org. hierarchy
 - Map to organization units
4. Form a service view
5. Form a process view
6. Form a data/info view
7. Form an applications view

Form a capability view

- ▶ How to insure the EA model against
 - staff turn over and
 - reorganisations
- ▶ that change the organisation structure?

- ▶ The convention is to
 - Decouple the architecture from the management structure
 - Find or build a *logical* organisation structure
 - Use it to engage business managers and map other architecture elements to it.
 - The level and rigor of decomposition varies from enterprise to enterprise.

Form a capability view – buy one?

- ▶ You may be able to find a logical structure in the form of a reference model that nearly fits your business – then tailor it

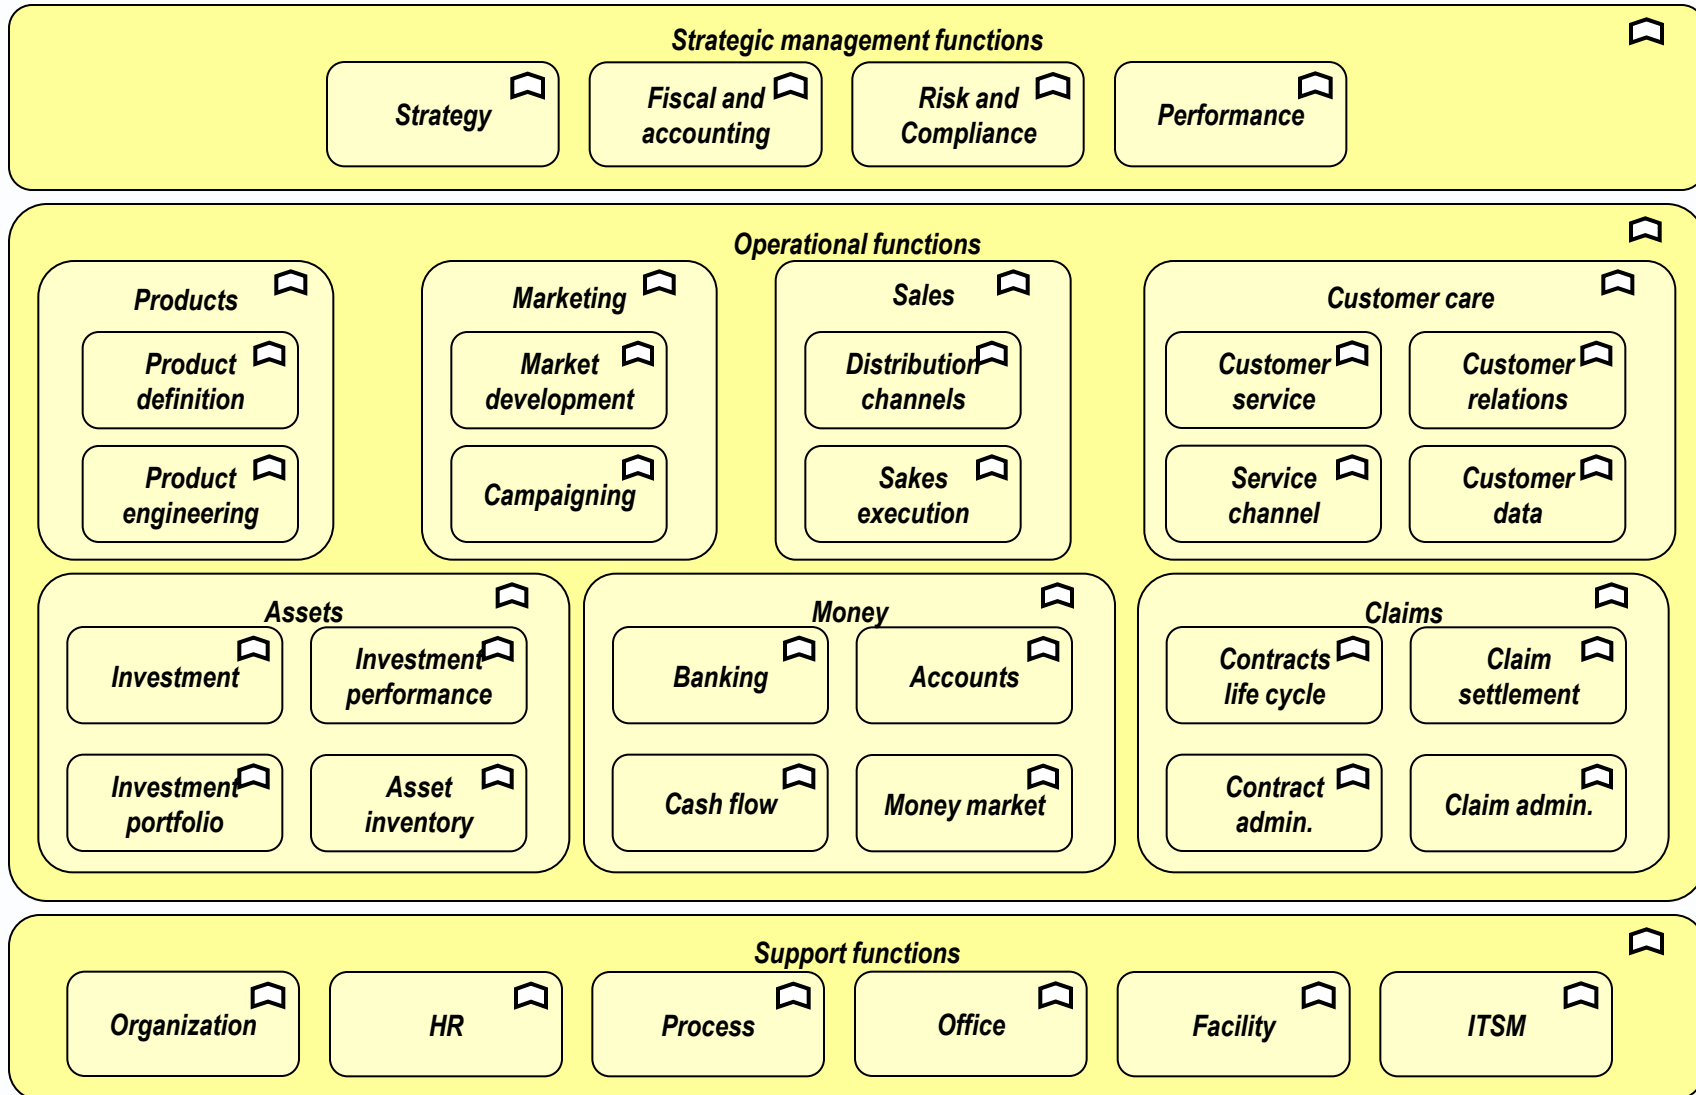

The BIAN Service Landscape V2.5

The BIAN Service Landscape V2.5

Form a capability view – build one? (ArchiMate)

Map business functions to organizational units

- ▶ An Organisation/Function matrix shows which organisation units realise which functions - at any chosen level of granularity.

- ▶ Functional organisation

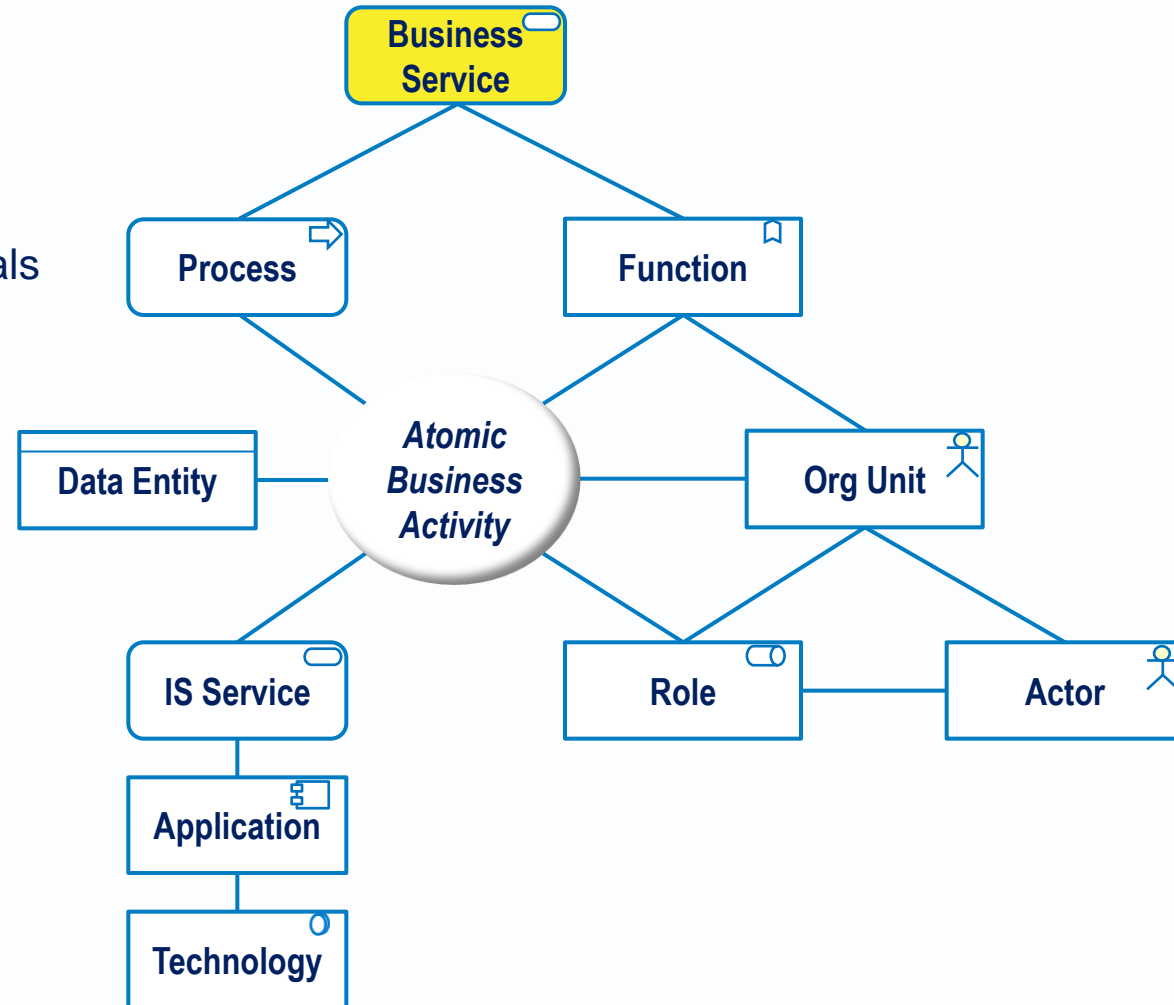

Organisation Function	Marketing	Sales	Delivery
Marketing	Activity		
Sales		Activity	
Delivery			Activity

- ▶ Non-functional organisation
 - Product? Customer? Location?

Organisation Function	Petrol	Paints	Plastics
Marketing	Activity	Activity	Activity
Sales	Activity	Activity	Activity
Delivery	Activity	Activity	Activity

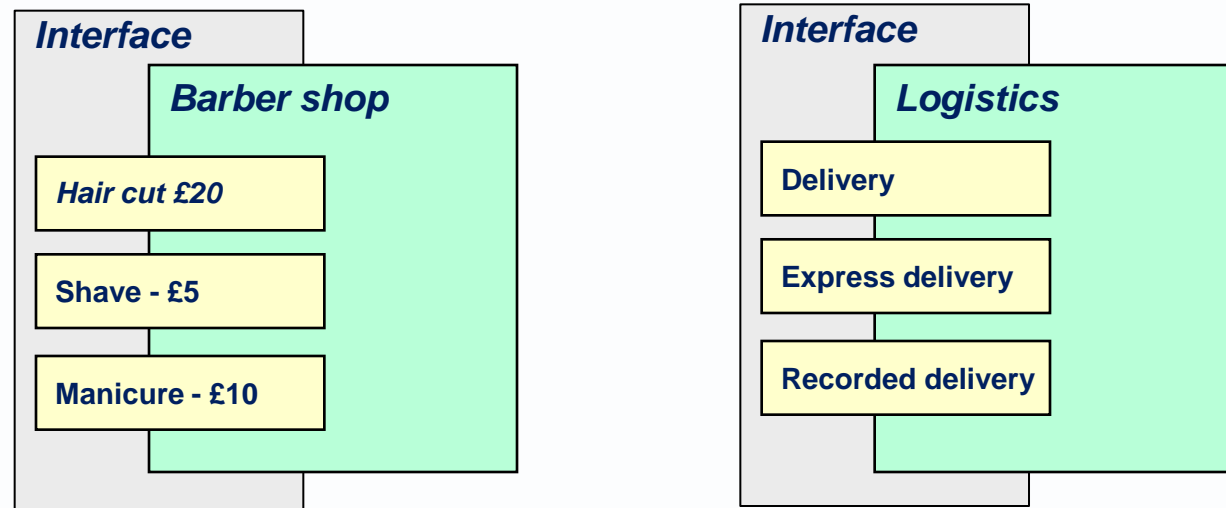

Form a service view

1. Form a motivation view
2. Form an organisation view
3. Form a capability view
4. Form a service view
 - Define services that meet the goals
5. Form a process view
6. Form a people view
7. For a data/information view
8. Form an applications view

Form a service view

- ▶ Looked at from the outside, a business or function within it can be described in terms of the services it offers.
- ▶ Akin to how we define an application

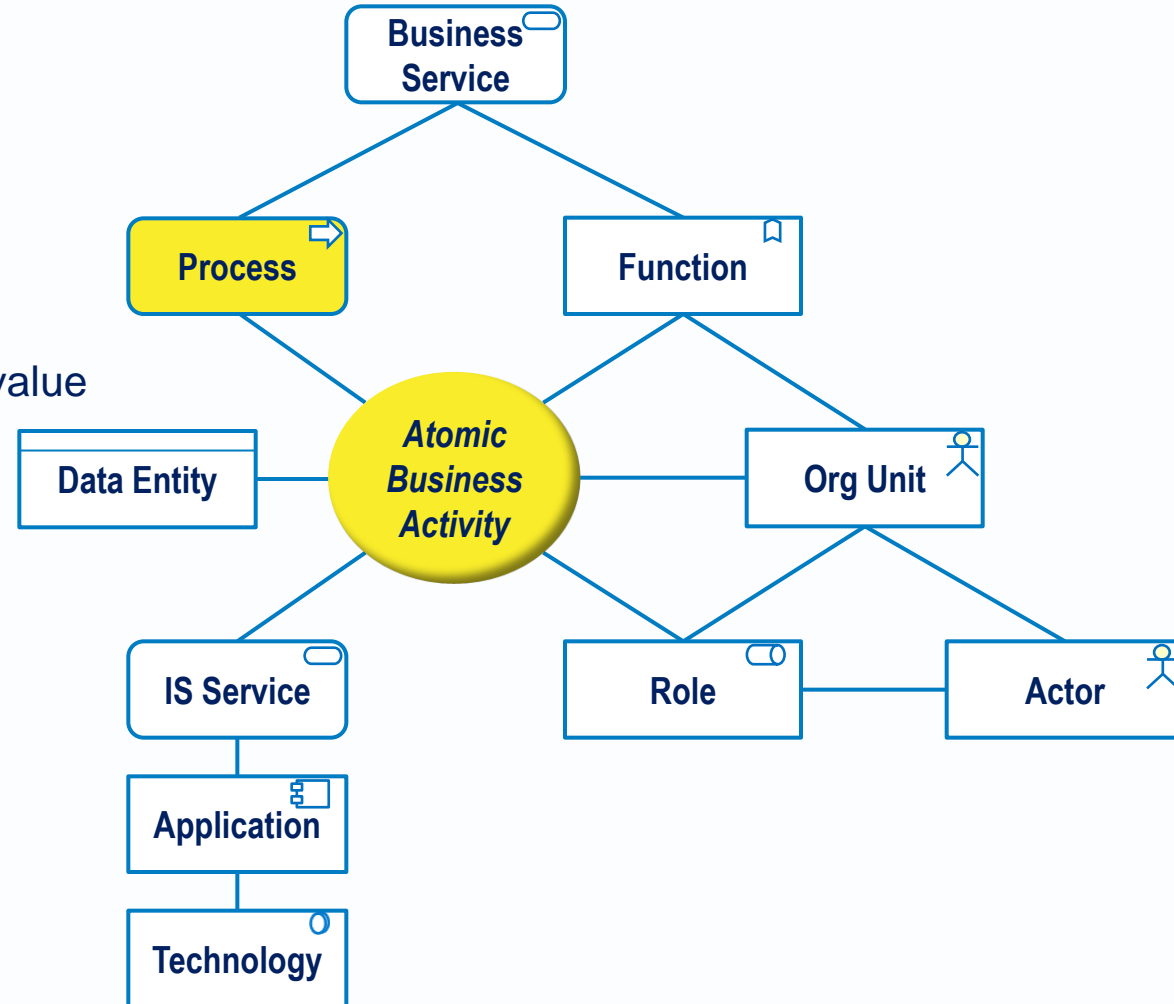

Detail business services to the extent necessary

- ▶ Name only
- ▶ Signature
 - Name
 - Trigger
 - Inputs and outputs
- ▶ Rules
 - Pre-conditions
 - Post conditions
- ▶ Non-functional qualities
 - duration
 - frequency
 - availability,
 - etc
- ▶ Name
- ▶ Entry Conditions
 - Trigger
 - Inputs
 - Pre-conditions
- Exit Conditions
 - Outputs
 - Post conditions
- ▶ Non-functional qualities
 - duration
 - frequency
 - availability,
 - etc

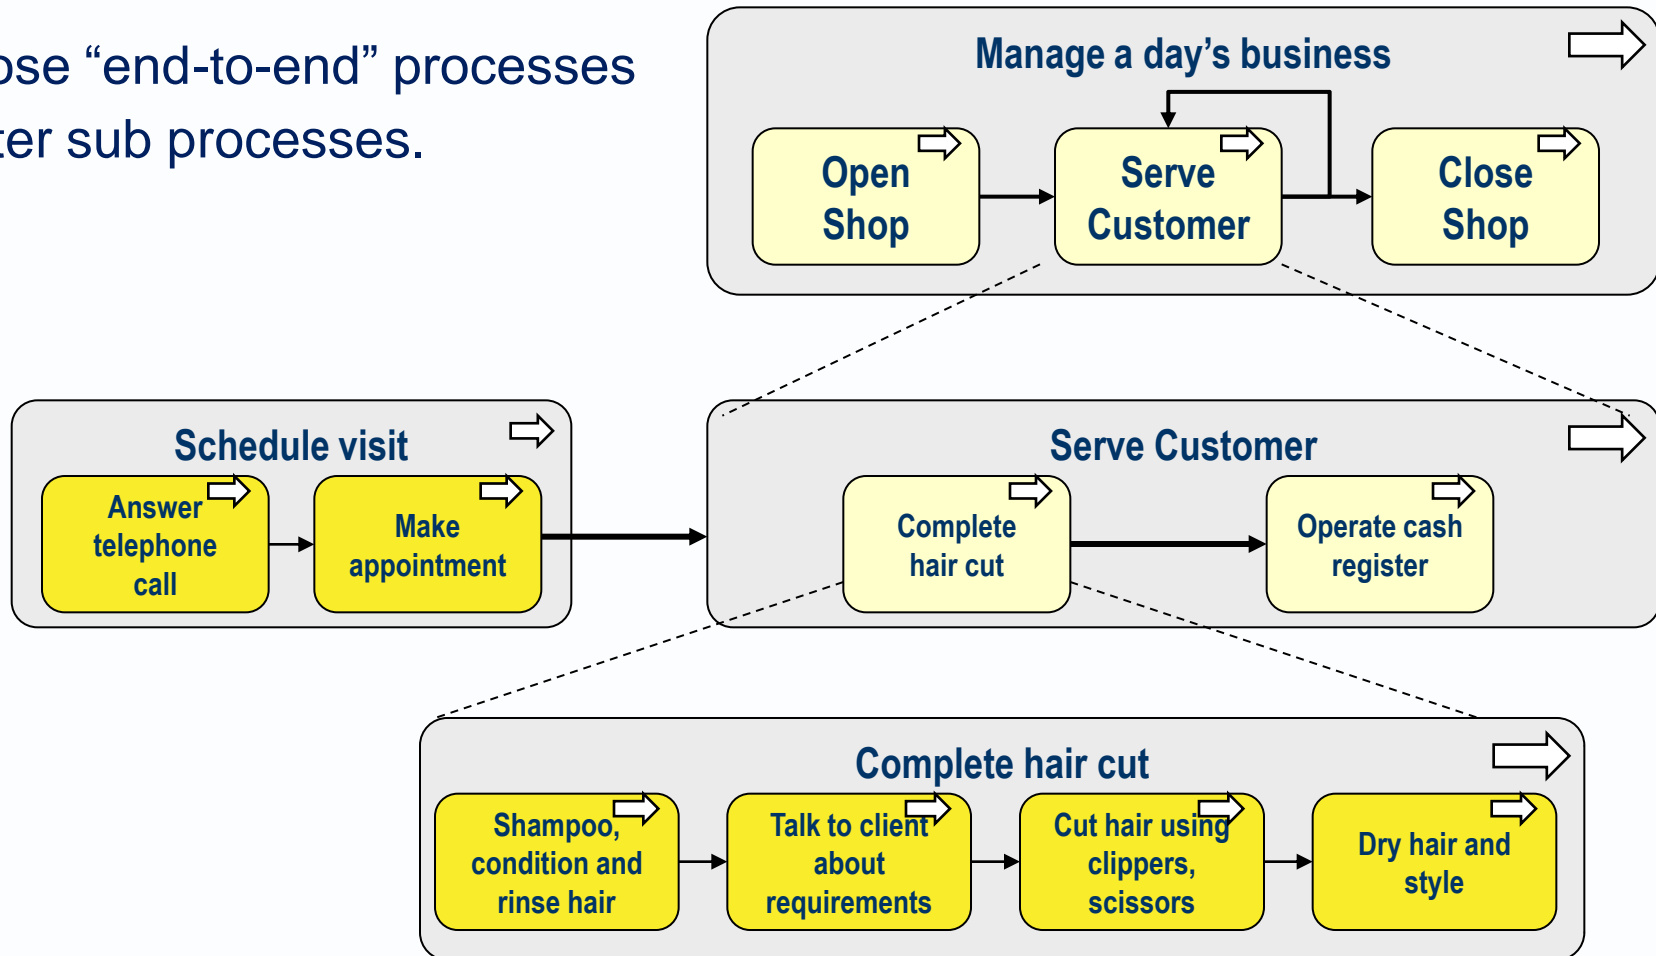

Form a process view

1. Form a motivation view
2. Form an organisation view
3. Form a capability view
4. Form a service view
5. Form a process view
 - Sequence activities in processes
 - that deliver products/services of value
6. Form a people view
7. Form a data/information view
8. Form an applications view

Form a process view

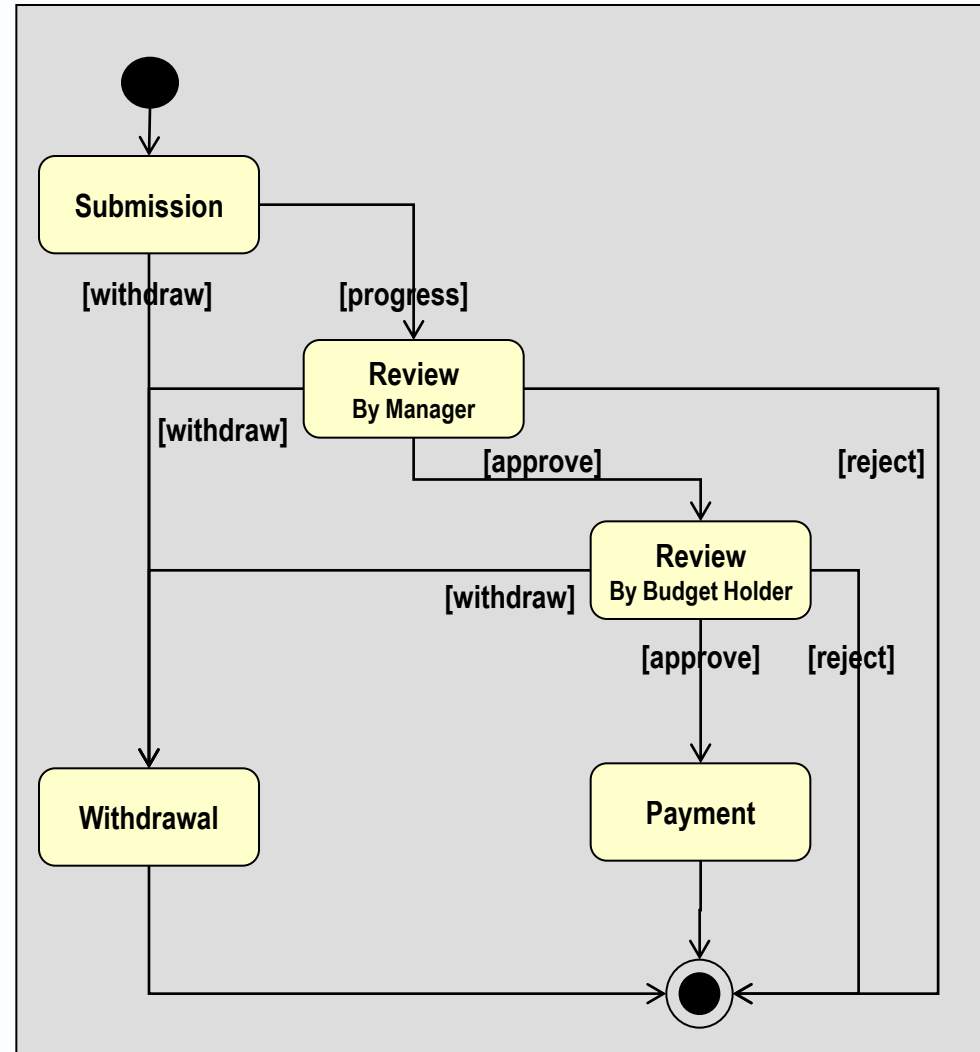

- ▶ Decompose “end-to-end” processes
- ▶ into shorter sub processes.

- ▶ Stop at One Person One Place One Time (OPOPOT) activities.

Detail business processes to the extent necessary

- ▶ Boxes show activities, events
- ▶ Arrows show flow of control

Map activities to functions/capabilities

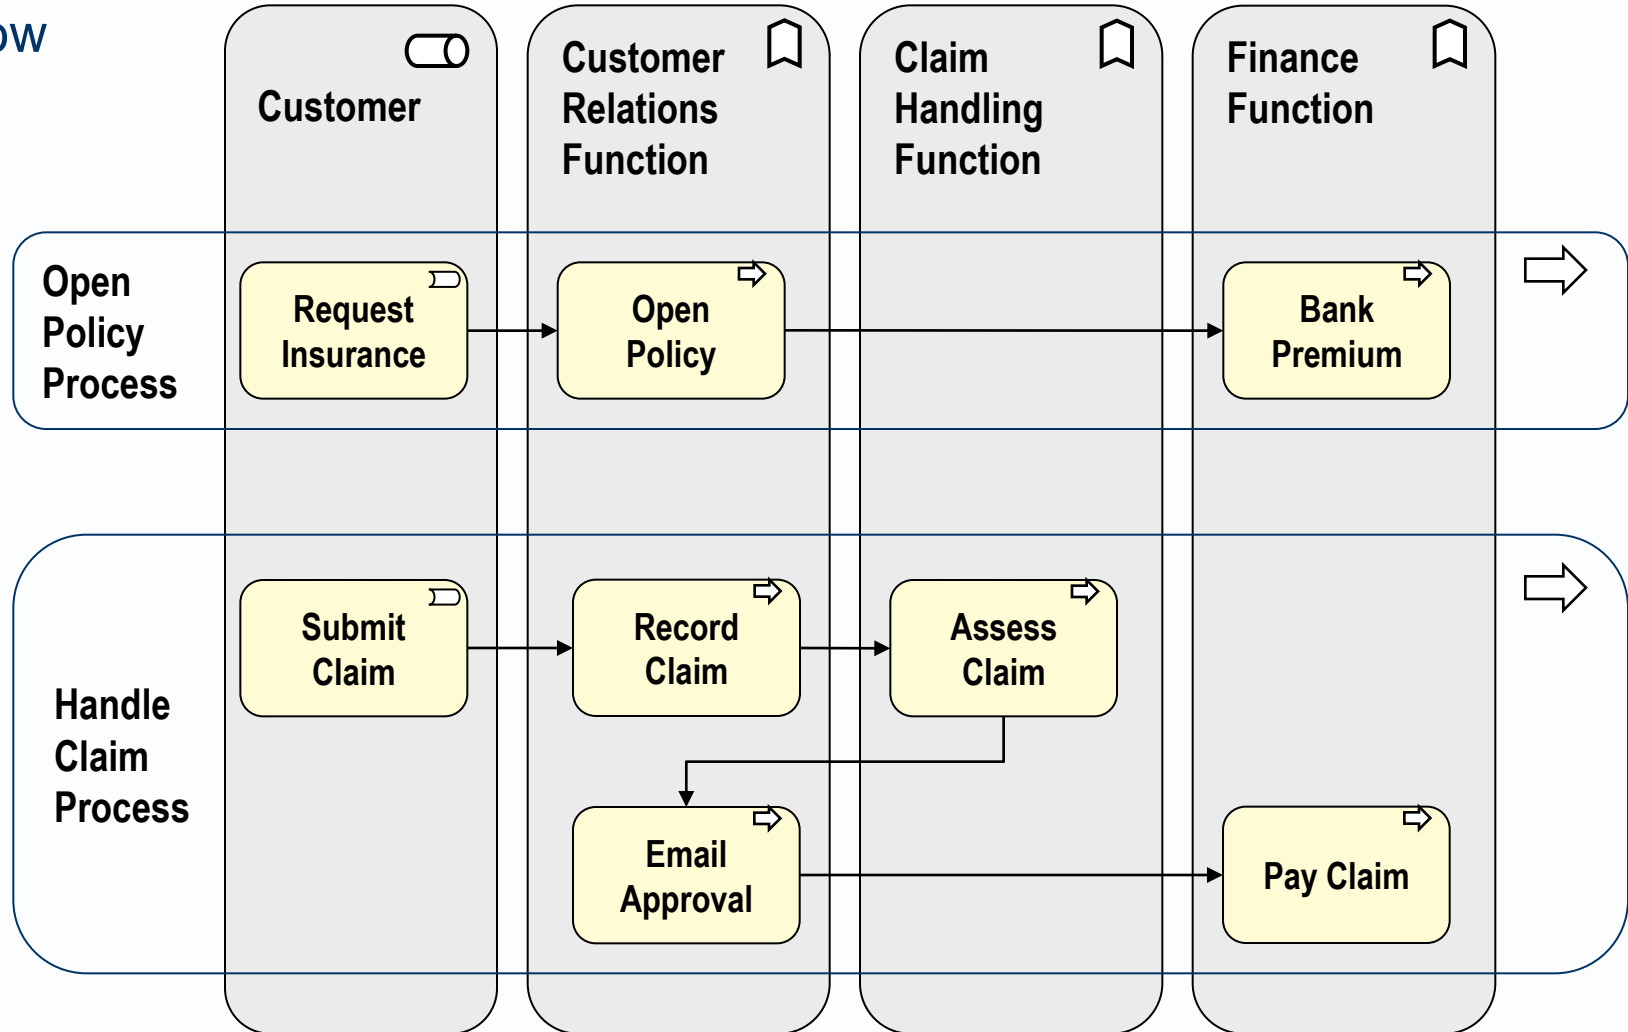

Example after ArchiMate guru Marc Lankhorst

Swim lanes show
Structure

-  Actor
-  Role or Function

Arrows show
Behaviour

-  Event
-  Trigger
-  Activity

Complete correspondence is a theoretical possibility

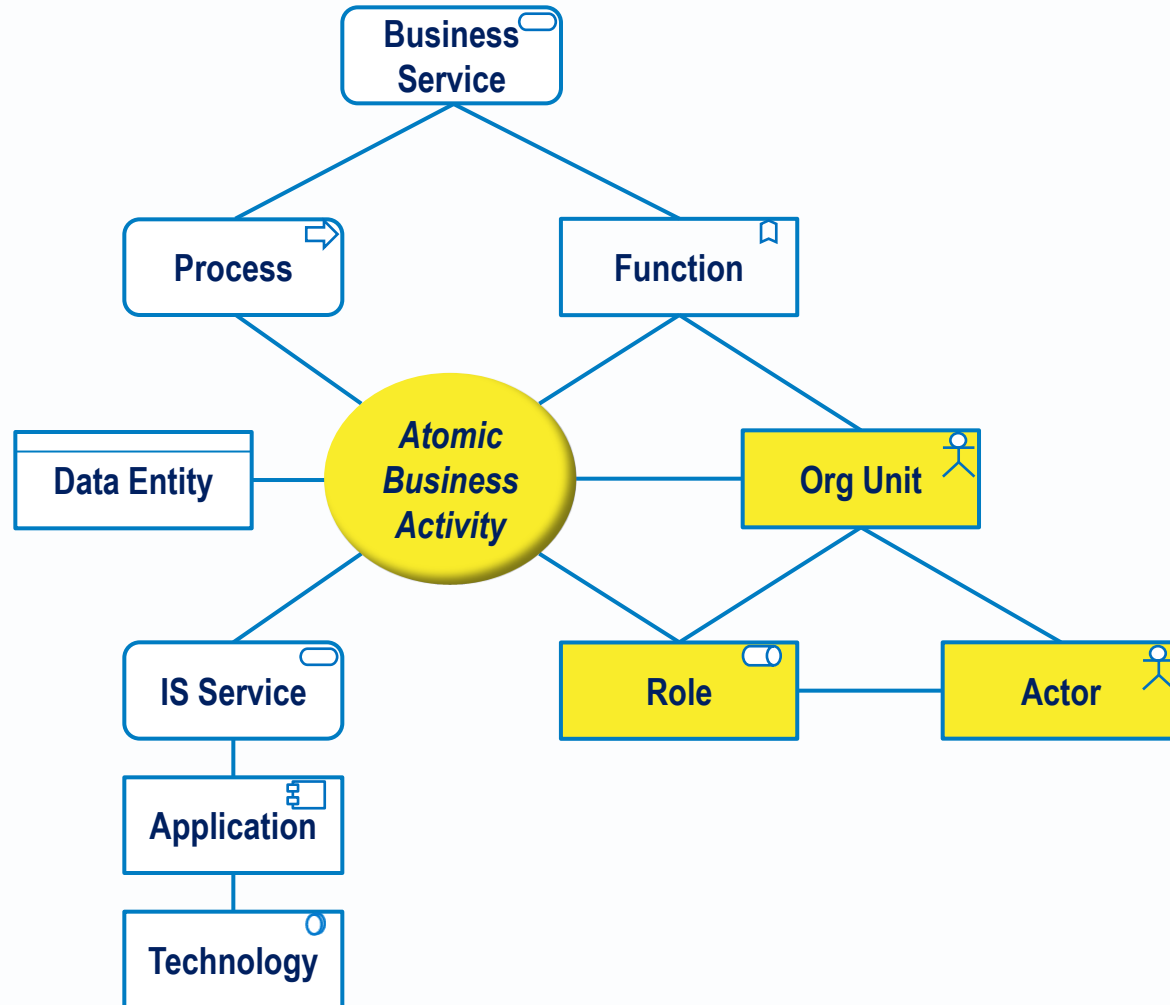

- ▶ Complete correspondence is a theoretical possibility,
- ▶ but almost nobody gets complete their models.
- ▶ The functional decomposition usually stops at a high (3rd or 4th) level
- ▶ whereas some process models descend to a lower (5th or 6th) level.

Function Process	Cust. Relat'ns	Claims	Finance
Open Policy	Open Policy		Bank Premium
Handle Claim	Receive Claim	Assess Claim	Pay Claim

*Atomic
Activities*

Form a people view

1. Form a motivation view
2. Form an organisation view
3. Form a capability view
4. Form a service view
5. Form a process view
6. Form a people view
 - Map activities in processes
 - to roles
7. Form a data/info view
8. Form an applications view

List Roles (and Actors?)

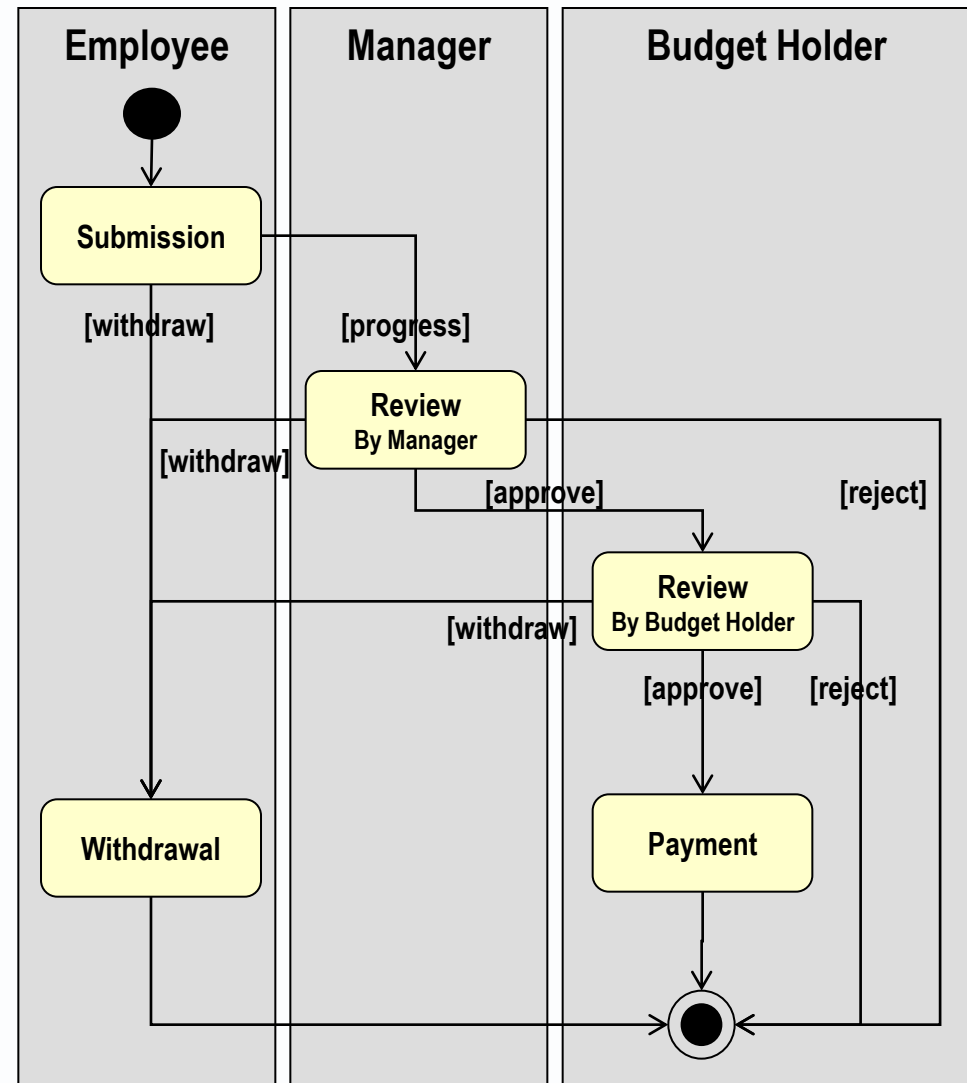

- ▶ A Role-Activity catalogue can list the activities expected of each role, perhaps along with the abilities the actor needs to play that role.
- ▶ An Actor/Role matrix shows which actors play which roles.

Role	Role A	Role B	Role C
Actor A			
Actor B			
Actor C			

- ▶ Architects usually model roles rather than actors
- ▶ Occasionally name actors where a role is performed by only one actor.

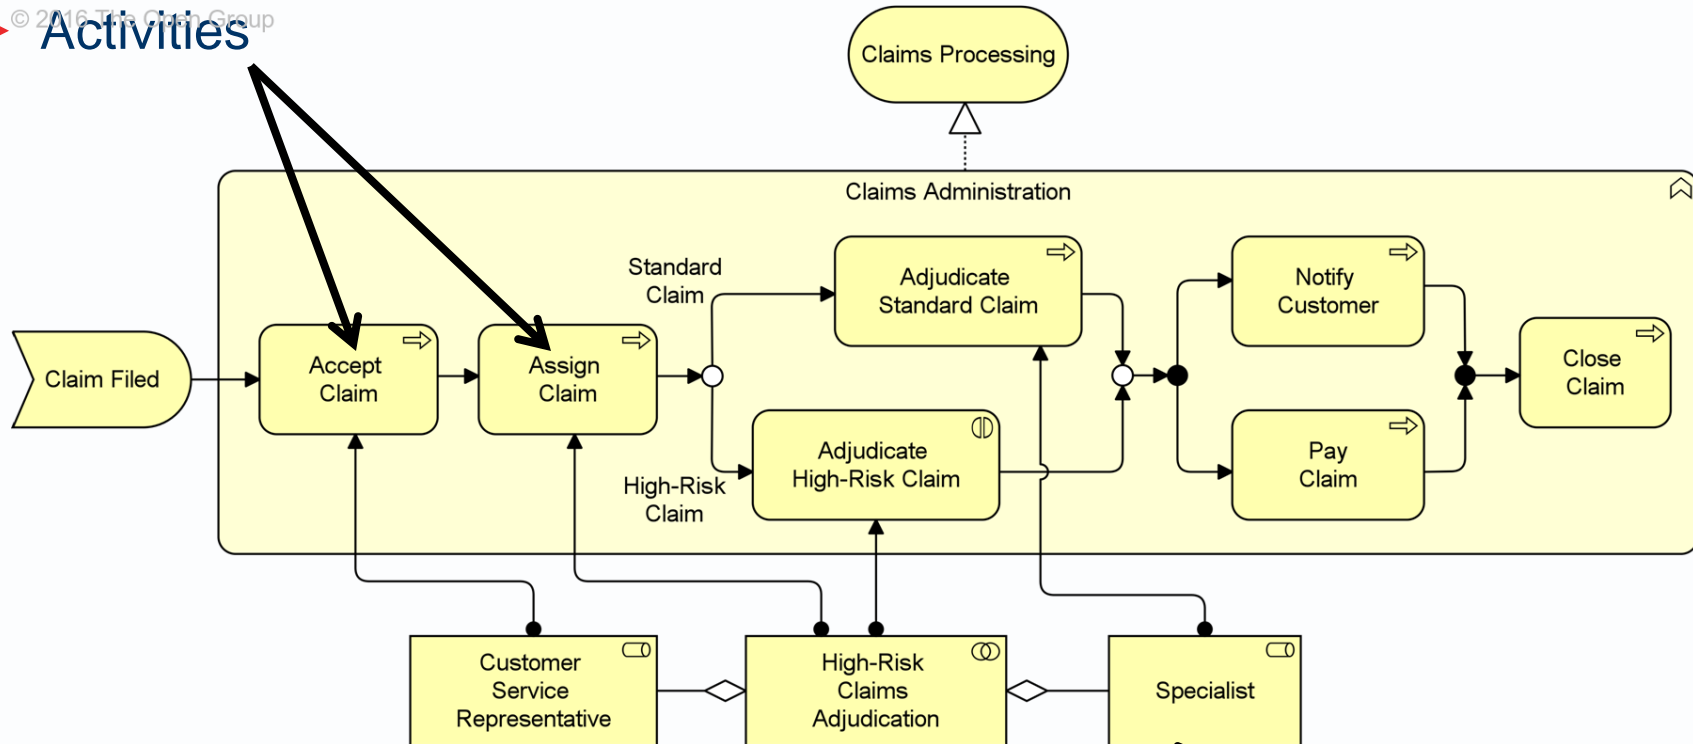

Map roles to activities in processes – swim lanes

- ▶ Swim lanes can show
 - Roles
 - Organizations
 - Functions or Capabilities

Map roles to activities in processes - ArchiMate

▶ © 2016 The Cluh Group
Activities

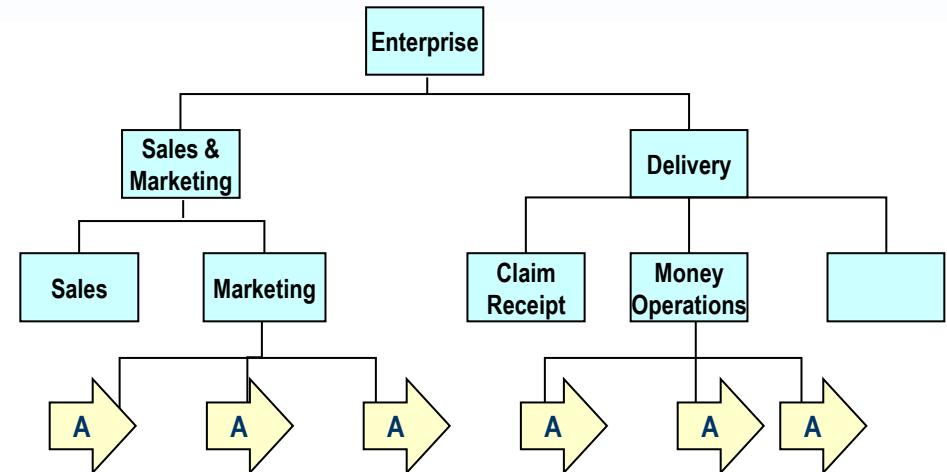

Roles

Collaboration

Map activities to organisation units

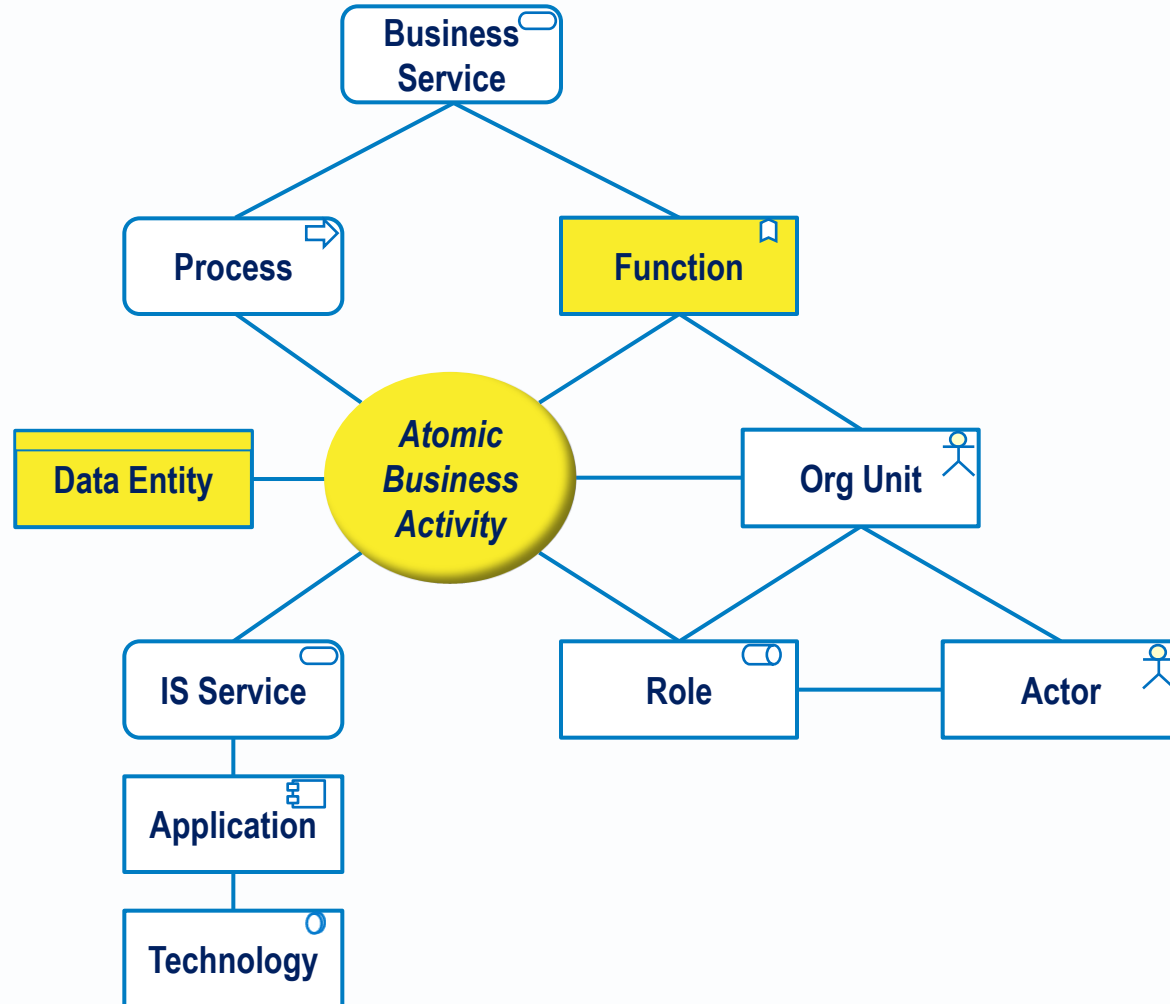

- ▶ Map activities from the processes to the organisation units
- ▶ Focus on activities that are
 - essential to provision of services,
 - frequent
 - carried out by many actors
 - create or use business data.

Organisation Activities	Sales	Marketing	Claim Receipt
Activity A	Performed in	Performed in	
Activity B	Performed in		Performed in

Form a data/information view

1. Form a motivation view
2. Form an organisation view
3. Form a service view
4. Form a management view
5. Form a process view
6. Form a capability view
7. Form a people view
8. Form a data/info view
 - Show flows between functions
 - Cluster activities by data created
9. Form an applications view

Map data entities to business functions

- ▶ A data/entity business function matrix usually maps atomic activities to data entity types (e.g. Customer, Order, Product Type, Product Instance) that those activities create or use.

Function Data Entity	Sales	Delivery	Finance
Customer	Create	Use	Use
Order	Create	Use	Use
Invoice		Use	Create

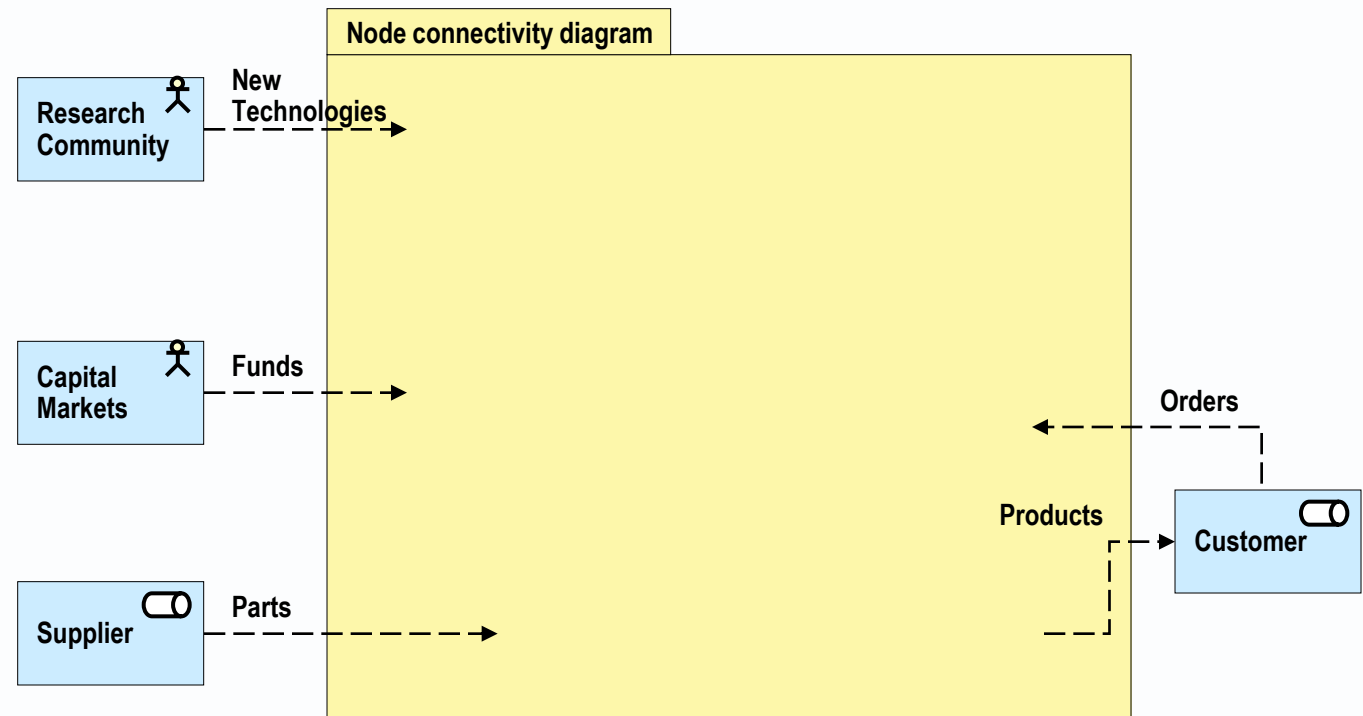

Clustering activities by Data created

- ▶ The North West corner method sorts the rows and columns of a matrix
- ▶ by clustering them on a shared cell entry, such as “create”.

	PROCESSES	DATA CLASSES																																																		
		Actual estimates	Agency plans	Budget	Program regs./policy	Admin. regs./policy	Labor agreements	Data standards	Procedures	Automated systems documentation	Educational media	Public agreements	Intergovernmental agreements	Grants	External	Exchange control	Administrative accounts	Program expenditures	Audit reports	Organization position	Employee identification	Recruitment/placement	Complaints/grievances	Training resources	Security	Equipment utilization	Space utilization	Supplies utilization	Workload schedules	Work measurement	Enumeration I.D. Business system concepts and artifacts in TOGAF

Business system concepts and artifacts in TOGAF

How to address the size problem?

- ▶ Enterprise architects very rarely
 - have the time and resources to model a whole business
 - use all the products that follow
- ▶ They usually
 - model only **part of a business relevant to a request for architecture work**
 - use only a **selection of the products that follow**
- ▶ So first, identify the **organisation of interest**
- ▶ And then, **select which products** will help analysis and design
